IMAGING LAB

Motivation

Strabismus: misalignment of eyes

- Affects 5% of all people
- 1.3M surgeries per year in U.S.
- 1 in 50 children has surgery

Treatment options:

- Surgery
- Prisms
- Vision Therapy

Prisms are static, therapy is hard.

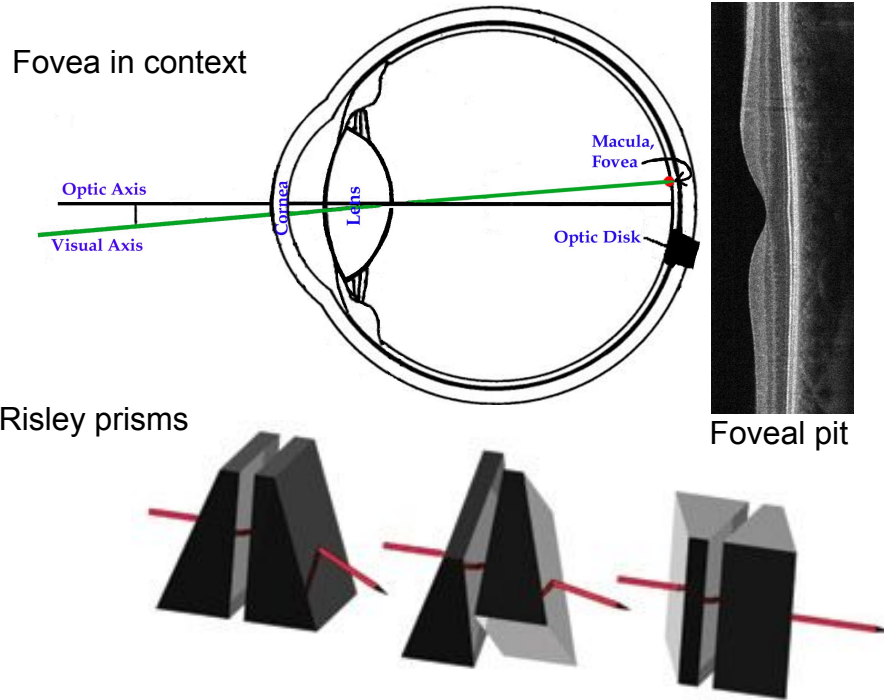

Why not have the best of both?

Methods

Solution: refocus light onto fovea of stray eye

- Risley prisms: back-to-back wedge prisms

Results

“Before”
(CAD model)

“After”
(3D-printed)

Mechanized beam-steering

Future Work

Eye tracking

Wearable frame

Recessed stepper motors
(preserve peripheral vision)
